

About SplitDraw™

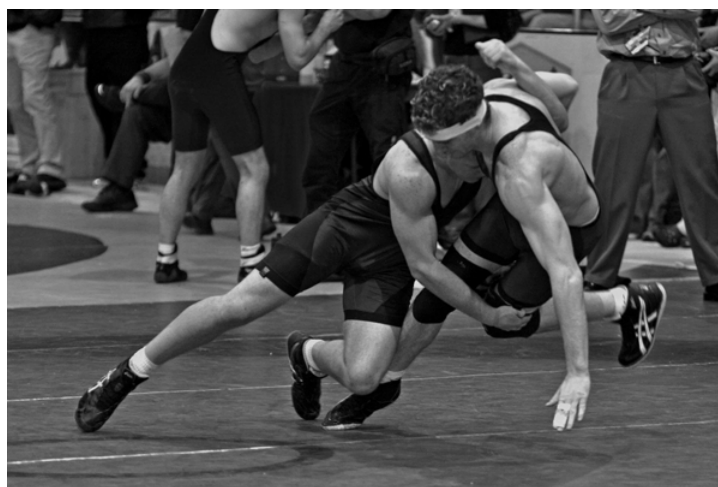

SplitDraw™ is a computer aided draw master tool that generates Bracket and Round Robin draws for competitive events. In addition to this time-saving feature, SplitDraw™ can also run and manage these events using network computers. SplitDraw™ is a revolutionary new product in the Automated Sports Management industry. Event updates and schedules are immediately displayed on large high resolution projector screens for use by operators, coaches, officials and spectators. In addition, the system can generate large format prints of draws. First-round bout sheets can be printed directly from the software prior to the commencement of a tournament. The method has proven to be extremely accurate and expedient. In addition to local casting and scheduling, SplitDraw's streaming technology makes these events available to the world – Live over the internet.

Teams can be registered and maintained at the SplitDraw™ website (www.splitdraw.com). Registrations are free for all coaches, wrestlers, and officials. The online interface also allows benefits such as registering an event with SplitDraw™. Attendees to an event can be submitted directly and instantaneously via the website. The process is accurate and faster than other modes of attendee submission such as fax, email, or phone.

New features and updates are constantly added to the system to improve its net result of simplifying and speeding up the tournament hosting process. With recent successes at the regional levels, SplitDraw™ is gaining acceptance and recognition as a useful draw masters tool. 2008 is the scheduled year for integration of full feature sets originally envisioned for the system since its inception in 2001.

Powerful Features:

- **Team Management Tool**
- **Online Team Registration**
- **Pairing Master Tool**
- **Instant Draws**
- **Event Management System**
- **Live Media Updates**
- **Large Format Prints**
